## PROJECTS

**OpsPilot – Autonomous AI DevOps & CI/CD Infrastructure Engine** | GitHub | Live June 2026 – August 2026

- Architected a multi-tenant DevOps platform that automates CI/CD pipelines, containerized builds, testing, deployments, and observability, using NestJS, Next.js, PostgreSQL, Redis, and Docker.
- Engineered a visual DAG workflow system with Kahn's algorithm-based cycle detection, bidirectional DAG-to-YAML compilation, isolated Docker workers, HMAC-SHA256 webhook verification, and Redis-backed idempotency for reliable pipeline execution.
- Delivered production-grade security and observability through AES-256-GCM secret encryption, JWT/RBAC, SSE log streaming, Prometheus telemetry, automated health checks, and rollback workflows, backed by 160/160 passing backend tests.

*Tech Stack: NestJS, Next.js, TypeScript, PostgreSQL, Prisma, Redis, BullMQ, Docker, Kubernetes, GitHub Actions, JWT*

**ViralVerse – Scalable Viral Content Delivery Platform**| GitHub January 2026 – April 2026

- Architected a scalable AWS cloud infrastructure for unpredictable traffic spikes using VPC networking, EC2 compute, S3 storage, RDS MySQL, and multi-AZ deployment to establish a resilient content delivery environment.
- Engineered an Application Load Balancer with target groups, launch templates, and Auto Scaling to distribute traffic across healthy EC2 instances, enabling dynamic capacity scaling from 1 to 2 instances based on demand.
- Implemented infrastructure monitoring with Amazon CloudWatch, validating CPU utilization through controlled load testing while provisioning managed MySQL RDS and scalable S3 storage.

*Tech Stack: AWS EC2, S3, RDS MySQL, VPC, Application Load Balancer, Auto Scaling, CloudWatch, IAM, Security Groups*

## TRAINING

DevOps Fundamentals: Building Skills from Code to Deployment-DevOps & CI/CD | Certificate June 2026 – July 2026

- Built the StockFlow inventory management platform using React, TypeScript, Node.js, PostgreSQL, Docker, and CI/CD workflows, developing core inventory operations and a containerized application delivery pipeline.
- Embedded CI/CD and automated quality checks into the StockFlow development workflow, addressing manual build and deployment challenges and improving consistency in software delivery.
- Integrated containerization, automated testing, and deployment practices into the project, creating a more structured and scalable DevOps workflow than a conventional inventory application.

*Tech Stack: TypeScript, Express.js, PostgreSQL, Prisma, Redis, Docker, Docker Compose, GitHub Actions, Git, GitHub*
